NEWS**FOR IMMEDIATE RELEASE**

BIRDERS GET SERIOUS ABOUT STAYING ORGANIZED IN THE FIELD
Dock-on / Dock-off modules mean easy, fast and quiet gear management

Grand Rapids, MI (September 2009) – Duckbill LLC is the premium manufacturer of stable, comfortable, high performance modular ergonomic, waterproof and quiet, carrying gear for outdoors enthusiasts of every stripe who carry a lot of heavy, sensitive and valuable task-specific gear. Each of the three Duckbill rigs and more than 150 cross-platform modules is designed to never look awkwardly out-of-place.

Instead of a one-function back pack that's too big and inaccessible on-the-move, or an over-stuffed fanny-pack that's too small and can't be organized Duckbill users use modular pouches, bags and packs to easily protect gear from moisture or impact. Any selection from the more than 150 modules are assigned by the user to positions of priority, weight and value. And if the priority ever changes, the Duckbill modules can be readily exchanged repositioned.

Each of the many interchangeable Dock-on / Dock-off modules is equipped with Duckbill's redundant, double clamshell, truly secure MaxCon™ docking technology. And offers more degrees of horizontal and vertical positioning freedom and nearly infinite micro-adjustability. Duckbill gear is manufactured using fabrics, fittings and closures that are quiet, and field-tested to hold up to repeated use, in all weather, terrain and field conditions.

About Duckbill LLC

Duckbill is a leading designer and manufacturer of personal, body-borne ergonomic carrying gear. All of Duckbill's gear incorporates its unique docking technology that allows each user to benefit from an ergonomic carrying solution, yet at the same time customize the carried gear, the weight distribution and the position of access. This allows each user to customize the fit and functionality of the gear to match size, frame, gender to the tool and task mix at hand one time, or any time.

Duckbill is based in the United States and Canada and designs, engineers and manufactures gear for industry, for law enforcement and for outdoors applications.
